TITLE: Conjugated peptide nucleic acids having enhanced cellular uptake

DATE-ISSUED: February 3, 2004

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Neilsen; Peter E.	Kokkedal			DK
Knudsen; Helle	Copenhagen			DK

US-CL-CURRENT: 530/300; 530/323, 536/22.1, 536/23.1

ABSTRACT:

Peptide nucleic acids conjugated to lipophilic groups and incorporated into liposomes exhibit enhanced cellular uptake and distribution. Cellular uptake and distribution of peptide nucleic acids also increases with the introduction of an amino acid side chain into the backbone of peptide nucleic acids. Methods of modulating cellular uptake and methods for treating animals are provided. The peptide nucleic acids of the invention comprise naturally-occurring nucleobases and non-naturally-occurring nucleobases attached to a polyamide backbone.

TITLE: Coated particles, methods of making and using

DATE-ISSUED: October 28, 2003

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Anderson; David	Colonial Heights	VA		

US-CL-CURRENT: 428/402.24; 424/422, 424/426, 424/450, 435/176

ABSTRACT:

A particle coated with a nonlamellar material such as a nonlamellar crystalline material, a nonlamellar amorphous material, or a nonlamellar semi-crystalline material includes an internal matrix core having at least one a nanostructured liquid phase, or at least on nanostructured liquid crystalline phase or a combination of the two is used for the delivery of active agents such as pharmaceuticals, nutrients, pesticides, etc. The coated particle can be fabricated by a variety of different techniques where the exterior coating is a nonlamellar material such as a nonlamellar crystalline material, a nonlamellar amorphous material, or a nonlamellar semi-crystalline material.

TITLE: Immunostimulatory polynucleotide/immunomodulatory molecule conjugates

DATE-ISSUED: August 26, 2003

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Carson; Dennis A.	Del Mar	CA		
Raz; Eyal	Del Mar	CA		
Roman; Mark	San Diego	CA		

US-CL-CURRENT: 514/44; 424/184.1, 424/185.1, 424/193.1, 536/23.1

ABSTRACT:

Immunostimulatory polynucleotide-immunomodulatory molecule conjugate compositions are disclosed. These compositions include a polynucleotide that is linked to an immunomodulatory molecule, which molecule comprises an antigen and may further comprise immunomodulators such as cytokines and adjuvants. The polynucleotide portion of the conjugate includes at least one immunostimulatory oligonucleotide nucleotide sequence (ISS). Methods of modulating an immune response upon administration of the polynucleotide-immunomodulatory conjugate preparation to a vertebrate host are also disclosed.

436/535

ABSTRACT:

The present invention relates to methods and compositions for the direct detection of membrane conformational changes through the detection of color changes in biopolymeric materials. In particular, the present invention allows for the direct colorimetric detection of membrane modifying reactions and analytes responsible for such modifications and for the screening of reaction inhibitors.

536/24.5

ABSTRACT:

Antisense compounds, compositions and methods are provided for modulating the expression of Phospholipase A2, group VI (Ca2+-independent). The compositions comprise antisense compounds, particularly antisense oligonucleotides, targeted to nucleic acids encoding Phospholipase A2, group VI (Ca2+-independent). Methods of using these compounds for modulation of Phospholipase A2, group VI (Ca2+-independent) expression and for treatment of diseases associated with expression of Phospholipase A2, group VI (Ca2+-independent) are provided.

Knudsen; Helle	Copenhagen			DK

US-CL-CURRENT: 530/300; 424/450, 536/23.1, 536/24.3, 536/24.5

ABSTRACT:

Peptide nucleic acids conjugated to lipophilic groups and incorporated into liposomes exhibit enhanced cellular uptake and distribution. Cellular uptake and distribution of peptide nucleic acids also increases with the introduction of an amino acid side chain into the backbone of peptide nucleic acids. Methods of modulating cellular uptake and methods for treating animals are provided. The peptide nucleic acids of the invention comprise naturally-occurring nucleobases and non-naturally-occurring nucleobases attached to a polyamide backbone.

ABSTRACT:

Methods which employ thin layer chromatography for separating and detecting hydrophobic target molecules are particularly useful in separating biologically relevant lipids. By utilizing non-destructive detection techniques, these methods also can be adapted to further quantification or structural analysis.

ABSTRACT:

Peptides which have a net positive charge and none or only a partial α -helix configuration were found to have a non-hemolytic selective cytolytic activity. The peptides may be derived from natural peptides such as pardaxin and mellitin and fragments thereof in which L-amino acid residues are replaced by corresponding D-amino acid residues, and cyclic derivatives of the foregoing, or are diastereomers of linear peptides composed of varying ratios of at least one positively charged amino acid and at least one hydrophobic amino acid, and in which at least one of the amino acid residues is a D-amino acid, and preferably at least one third of the sequence is composed of D-amino acid residues. Pharmaceutical compositions comprising the non-hemolytic cytolytic peptides can be used for the treatment of several diseases caused by pathogens including antibacterial, fungal, viral, mycoplasma and protozoan infections and for the treatment of cancer.

ABSTRACT:

The subject invention provides a naturally occurring antigen indicative of the presence of atherosclerotic plaque. The subject invention provides a murine-human chimeric monoclonal antibody which specifically binds to an antigen indicative of the presence of atherosclerotic plaque; and methods and reagents involving the use of the murine-human chimeric monoclonal antibody. The subject invention provides a CDR-grafted antibody; and methods and reagents involving the use of the CDR-grafted antibody. The subject invention provides a surrogate antigen; methods and reagents involving the use of the surrogate antigen, preparation of the surrogate antigen, antibodies generated from the surrogate antigen.

530/391.3

ABSTRACT:

An antigen comprising 5,7 cholestadien-3.beta.-ol (7-dehydrocholesterol) or a compound having a structure similar to 5,7 cholestadien-3.beta.-ol and a quaternary ammonium salt is provided. Also provided is a method of generating an antibody using the aforementioned antigen, as well as antibodies produced thereby and fragments of such antibodies. The invention also provides a rat myeloma cell line Z2D3 73/30 1D10 and a murine-human chimeric monoclonal antibody produced thereby. A CDR-grafted antibody comprising a CDR region amino acid sequence from hybridoma Z2D3 or hybridoma Z2D3/3E5 and framework and constant region amino acid sequences from a human immunoglobulin is further provided. Also provided are methods for imaging atherosclerotic plaque, ablating atherosclerotic plaque, detecting and quantitatively determining in a sample an antigen indicative of the presence of atherosclerotic plaque, reducing the amount of atherosclerotic plaque in a blood vessel, and treating atherosclerosis in a subject. The invention also provides peptides having amino acid sequences which are the same or substantially the same as those of the aforementioned murine-human chimeric monoclonal antibody, as well as isolated nucleic acid sequences encoding therefore.

ABSTRACT:

The present invention provides a stable composition of matter based on the cytotoxic activity of a basic phospholipase A.sub.2 of molecular weight 14,500 and isoelectric point 9.6-9.7 (crotoxin B) isolated from the venom of Crotalus durissus terrificus which in complex with a specific, non-enzymatic, peptide of molecular weight 9,500 and isoelectric point 3.5-3.7 (crotoxin A) displays a preferential cytotoxic activity against various types of tumor cells. When administered parenterally in an acceptable vehicle and in pharmacologically efficient amounts to animals and humans the complex is useful in the treatment of malignant tumors in advanced stages. The method for purification of the active components, the preparation in a pharmacologically acceptable form, and the method of therapeutic use of the present composition of matter are also disclosed.
